

170.315(b) (10) Electronic Health Information (EHI) Export in MDFlow™ EHR V 8.0

The patient Electronic Health Information (EHI) export contains data stored in the patient's chart in the SQL database. The C-CDA or Consolidated Clinical Document Architecture or CSV Text file or PDF File is used for health information exchange.

- We support multiple file formats for export patient EHI data.
- The primary patient's EHI export format is CCDA.
- Our system can also accommodate our clients' special and customized requests of the EHI export. The proprietary file format CSV Text file and/or PDF File are used in these cases.
- Our system can export single patient's EHI or a group of patients' EHI.
- The Zip file is used to compress the data if the file size is large.
